DETAILED ACTION

This Application has been examined. The original claims 1-8 are pending. The examination results are as follows.

Allowable Subject Matter

1. Claims 1-8 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The present invention is directed to a coordinate detecting system and methods for detecting X and Y coordinates position of a sensor pen touching a touch panel. The independent method claim 1 requires a converting step (11) for performing an orthogonal converting and the steps (12 and 15) of transmitting polling signals, see figures 1 and 4; while the independent apparatus claim 4 requires a control means (52) for transmitting polling signals and a converting means (51) for orthogonal converting I/O ports; see figures 2 and 5; whereas the closest prior art, the Landmeier patent (U.S. Patent No. 6,118,084), and the Inoue et al. patent (U.S. Patent No. 6,075,520), each teaches a coordinate detecting system comprising a multiplexer and a controller for controlling the output driving signals; either singularly or in combination, teaches or suggest the claimed invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. They are: U.S. Patents Nos.: 6610936, 6255604, 6246394, 5880411, and 5347787, which teach coordinate detecting systems and methods.
